Productive Practices new Straddle stool provides optimal seating allowing for proper positioning of the spine and the pelvis. The stools pre-positions you into an anterior-pelvic-tilt similar to sitting on a saddle. The angle allows for proper balance of core muscles and maintenance of normal curvature 'Lordosis' without the use of a backrest. The Straddle seat provides forward tilt allowing you to work 'flexed' without placing stress on the spine. Adaption of the assistant arm allows the optimal ergonomic seating benefits for the assistant.
